DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-17, drawn to an apparatus for controlling an industrial control system, classified in class 700, subclass 282; and
- II. Claims 18-22, drawn to a method of testing valves, classified in class 73, subclass 1.72.

The inventions are distinct, each from the other because of the following reasons:

Inventions II and I are related as process (II) and apparatus (I) for its practice.

The inventions are distinct if it can be shown that either: (a) the process as claimed can be practiced by another and materially different apparatus or by hand, or (b) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case, the process of valve testing can be performed by hand *and* the apparatus may be used to simply control an industrial control system rather than requiring its use for a testing method, which involves selectively energizing and de-energizing certain solenoid valves in a particular order. The examiner only needed to provide support for (a) or (b), but has instead, provided support for both (a) and (b) to emphasize that invention I and II are truly distinct from one another.

Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.

It is also noted that invention I (claims 1-17) are broader than similar claims already patented in U.S. Patent No. 6,722,838, classified in class 700, subclass 282. Also, it is also worth noting that invention II (claims 18-22) are co-extensive in scope to claims patented in U.S. Patent No. 6,862,914, classified in class 73, subclass 1.72. Clearly, inventions II and I are recognized as being distinct as they have already achieved different classification by way of parent applications 09/756,844 and 10/663,588, both having matured into respective patents.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
